Large Natural Avalanche- Elephant Mountain

Date
Sun, 12/10/2023 - 10:20
Activity
Ice Climbing

Yesterday 12/10/2023 at 0900, my climbing partner and I observed a clear crown line extend that extended throughout much of the east/ north east aspect of the bowl on Elephant Mountain.

My partner and I were both surprised by the depth of the crown. The eastern most point of the crown (photo left) was the deepest.

Region
Northern Gallatin
Location (from list)
Hyalite - main fork
