

Cooke City, monitoring Feb. 3 dust/ facet layer

Date

Fri, 02/14/2025 - 15:20

Activity

Snowboarding

Recent snowpits attached from mid elevation E, and SE aspects near Cooke City.

Of note, it appears that the Feb. 3 dust layer, perhaps has become weaker/ more faceted with the recent below 0F temps of the last 4 days. Will continue to monitor this layer of concern as the weekend storm progresses.

Region

Cooke City

Location (from list)

COOKE CITY

Observer Name

B. Fredlund
